OLUWASEUN OGUNKOYA

DATA ANALYTICS | INFORMATION TECHNOLOGY | SOFTWARE DEVELOPMENT

908-265-8115 • azeemaogunkoya777@gmail.com • Newark, NJ

EDUCATION

B.S. Information Technology | New Jersey Institute of Technology (NJIT) *Dec 2026 • Newark, NJ*

Relevant coursework: Database System Design & Management; Advanced Data Structures & Algorithms; Business Statistics; Programming Language Concepts; Intensive Programming Practicum.

TECHNICAL SKILLS

Programming: Python, SQL, R, Java, C#, HTML, CSS

Analytics & ML: Tableau, Power BI, Scikit-learn, TensorFlow, NLP, Spark

Platforms & Development: FastAPI, React, Node.js, Docker, AWS, GitHub, Tailscale

Databases & Services: MongoDB, NoSQL, SQLite, Supabase

PROFESSIONAL EXPERIENCE

Research Assistant (Data Analyst) | CloudAlp Technologies *Dec 2025 – Apr 2026 • Remote*

- Supported a NetSuite consulting team with enterprise-system implementation, configuration, and process optimization across client environments.
- Analyzed business data and reporting workflows to identify inefficiencies and support improvements in data accuracy and operations.
- Assisted with system customization, integrations, and automation initiatives in collaboration with technical and functional teams.

Junior Data Analyst | Updatus Inc. *Jun 2024 – Sep 2025 • Remote*

- Queried and validated structured datasets using SQL to support database management and application operations.
- Assisted with software and network configuration, troubleshooting, and root-cause analysis to support system stability.
- Tested features, verified fixes, and documented technical issues and resolutions for internal teams.

IT Infrastructure & Network Support Technician | Plainfield Public Library *Jan 2025 – May 2026 • Plainfield, NJ*

- Assisted with network infrastructure deployment, hardware setup, Ethernet termination, and connectivity testing.
- Supported firewall configuration, basic network security, and diagnosis of hardware and connectivity issues.

SELECTED TECHNICAL PROJECT

Project Manager & Developer — Verdura Smart Greenhouse Platform | Academic Team Project •

- Led coordination within a four-person Agile team modernizing an ESP32/Raspberry Pi IoT greenhouse platform for mobile use.
- Independently designed, built, and validated two FastAPI microservices for predictive irrigation and analytics capabilities.
- Contributed to a system architecture incorporating a Node.js backend, React dashboard, real-time functionality, and multi-user features.
- Presented the completed platform to a panel of judges representing NJIT-affiliated companies and corporations, explaining the project's technical implementation and capabilities.
